

Current Report No 1/2022

Start of pilot production of analysers Genomtec®ID in the UK.

The Management Board of Genomtec S.A. based in Wrocław ("Issuer", "Company") hereby announces that on January 12th, 2022 the Company has started pilot production of analysers for the first 15 Genomtec®ID devices. The analysers are manufactured by the Genomtec team in the UK in close cooperation with the CDMO partner.

The start of production is followed by the completion of the design and reliability testing of the analyser components. The first 15 devices will be used in clinical comparative studies, the results of which will serve to register Genomtec®ID as a medical device for in-vitro diagnostics under the directive 98/79/EC (IVD) in the European Union in the first half of this year.

The analyser is a small and lightweight device measuring 16.5 cm by 11.5 cm and 11 cm high. It fits in the palm of your hand and is highly portable, allowing you to carry out the diagnostic process at the point of care, without the need for complex and time-consuming handling in the laboratory by qualified personnel.

The commencement of pilot production of analysers is an important stage in the Issuer's key project and therefore, in the opinion of the Management Board, this information meets the criteria of confidential information within the meaning of Article 17(1) MAR.
